

VICTORIA'S SECRET

INTERN DATA SCIENTIST – DATA SCIENCES & ANALYTICS - JOB DESCRIPTION

TITLE: Intern Data Scientist

DEPARTMENT: Data Sciences & Analytics

LOCATION: Bangalore, India

REVISION DATE: Jan 11, 2026

TEAM:

The Enterprise Data Sciences & Analytics is an upstart CoE team, incubated within Victoria' Secret & CO. (VS&Co), building the best-in-class suite of Data Science & Analytics Products that power the best shopping experience for our customers, and deliver actionable, customer-centric insights to our ecommerce, marketing, merchandising and supply chain teams enabling better business decisions on omni channel (digital + store) 360 performances.

PURPOSE

The intern data scientist will work with a data science mentor and play a key technical role in analysing large data sets to develop custom models and algorithms to drive business solutions. The projects the interns shall be working on are core retail problems spanning across few key areas. A select few problem statements:

Project 1	Title: Supply Chain Cost Optimization • Description: Predictive cost modeling by Forecasting landed costs using data & images, historical data and macroeconomic indicators; Identify cost anomalies across similar styles to flag negotiation opportunities or errors. Required Skills & Traits: ML/DL algorithms, python/sql programming, data science introduction Expected Outcomes: Optimize cost
Project 2	Title: Customer Forecasting Description: Predict customer file and guide marketing investments and campaign decision planning based on traffic trends by different marketing drivers Required Skills & Traits: ML/DL algorithms, python/sql programming, data science introduction Expected Outcomes: customer file forecast outputs along with interpretable drivers for scenario planning
Project 3	Title: Customer Lifecycle Modeling – Next Best Action Models Description: Build customer lifecycle state models through a set of next best actions to increase customer retention, cross-category penetration, trip frequency and omni-channel shopping. Required Skills & Traits: ML/DL algorithms, python/sql programming, data science introduction Expected Outcomes: Next best action model developed and productionized; model outputs leveraged for customer journey campaigns
Project 4	Title: Supply Chain Forecasting & optimization

	Description: Develop state-of-the art forecasting models at sku level to help DC teams in inventory planning and fulfilment forecasts; build optimization algos. Required Skills & Traits: ML/DL algorithms, python/sql programming, data science introduction Expected Outcomes: model developed and productionized; model outputs leveraged for supply chain decision planning
Project 5	Title: <u>Agentic AI Use cases</u> Description: Build Agentic AI applications for the enterprise; end-to-end application build using state-of-the art llm models Required Skills & Traits: LLMs, Prompt engineering & finetuning, LLM Evaluations, LLMOps Expected Outcomes: Agentic AI application live

- You have a deep interest and passion for technology. You love writing and owning codes and enjoy working with people who will keep challenging you at every stage. You have strong problem solving, analytic, decision-making, and excellent communication with interpersonal skills. You are self-driven and motivated with the desire to work in a fast-paced, results-driven agile environment with varied responsibilities.
- You will work directly on the AI problems that have the most impact on VS&Co's digital e-commerce, omni-channel, entire supply chain, forecasting and merchandising.

VICTORIA'S SECRET

RESPONSIBILITIES

An Intern Data Scientist will work very closely with a data science mentor and would be responsible for building data science and machine learning/deep learning solutions for our business problems across e-commerce, finance, store operations, logistics and supply chain:

- Research and propose innovative statistical/ML/DL models to address the requirements.
- Target and formulate various problems in terms of key business metrics and measure the impact of the built ML/DL techniques.
- Analyze data for trends & patterns and interpret data with a clear objective in mind.
- Develop, deploy ML/DL models in production or help develop a platform to facilitate the same.
- Work closely with the Engineering team to take Data Science projects to production.
- Communicate progress/findings to relevant stakeholders.
- Keep updated with emerging technologies in AI/ML.

EDUCATION

- B.S. / MS degree in Computer Science, Mathematics, Data Science, Statistics

SKILLS / EXPERIENCE

- Knowledge of the foundations of machine learning and statistics. Familiarity with statistical methods such as hypothesis testing, forecasting, time series analysis, etc. (Required).
- Experience with SQL, Python (Required). Experience with PySpark, Snowflake and Rest/Fast APIs (Preferred)
- Experience in Machine Learning, Deep Learning or Engineering aspects of ML model deployment (Required).
- Has or pursuing Bachelor's/Master's/PhD degree in Computer Science, Statistics, Applied Mathematics, or related discipline (Preferred)
- Experience of working on optimization problems - linear/nonlinear programming, (meta)heuristics for solving optimization problems (Preferred)
- Proficiency in data analysis, mathematics/probability, and statistical analysis (Required). Past Data Science project experience (Preferred)
- Should be comfortable multitasking and working in a dynamic, fast paced environment.
- Effective communication of DS requirements and dissemination of right knowledge to relevant stakeholders
- Most importantly, an inquisitive mind, an ability for self-learning and abstraction along with a risk appetite for experimentation and failure.

VICTORIA'S SECRET

PERSONAL CHARACTERISTICS

We love open source! Many of our team members contribute to open source communities and get to do it during work time. We try to contribute back to our communities where we can and are grateful to be able to open source some of our own projects!

1. Unique individuals that are innovators
2. Highly energized personality with a positive attitude and ability to work with minimal supervision, prioritize, multi task and work under tight timelines

We value diversity. We believe that diversity and inclusion is of core importance when try to create positive in-store experiences for our guests, and we think it is also critically important when building our teams. Read more about our commitment to diversity and inclusion.

MANDATORY SKILLS

- Machine Learning, Python, Big Data Skills, R, Statistics
